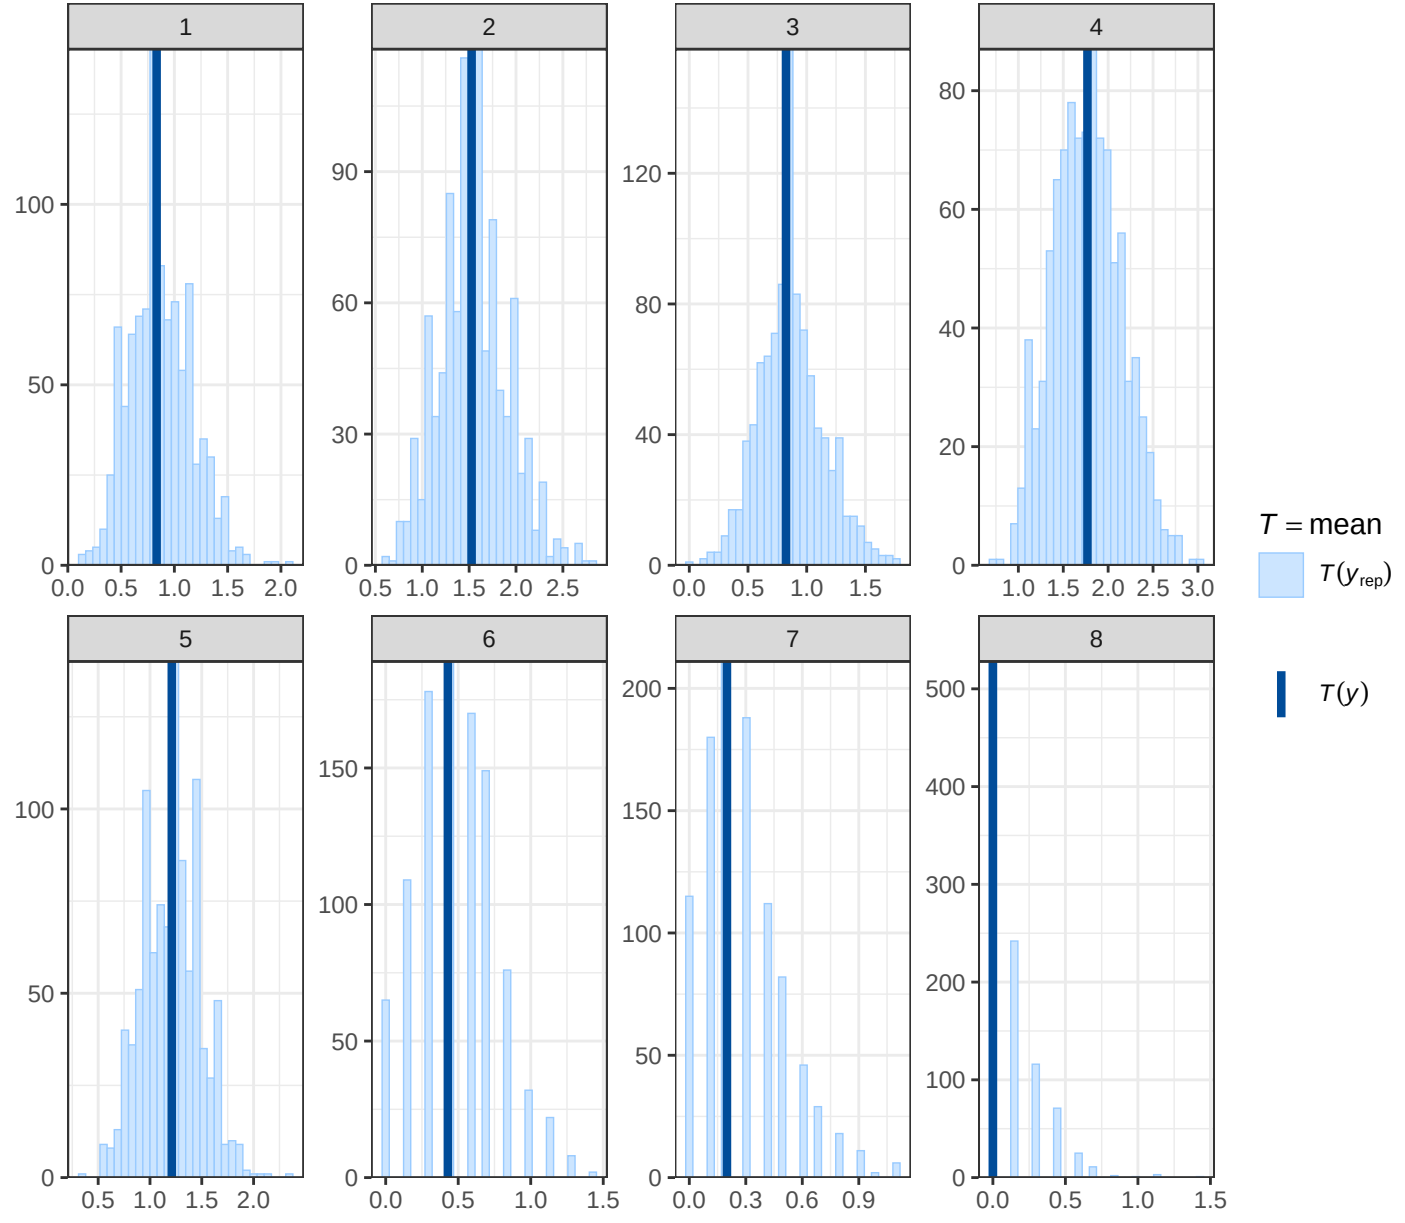
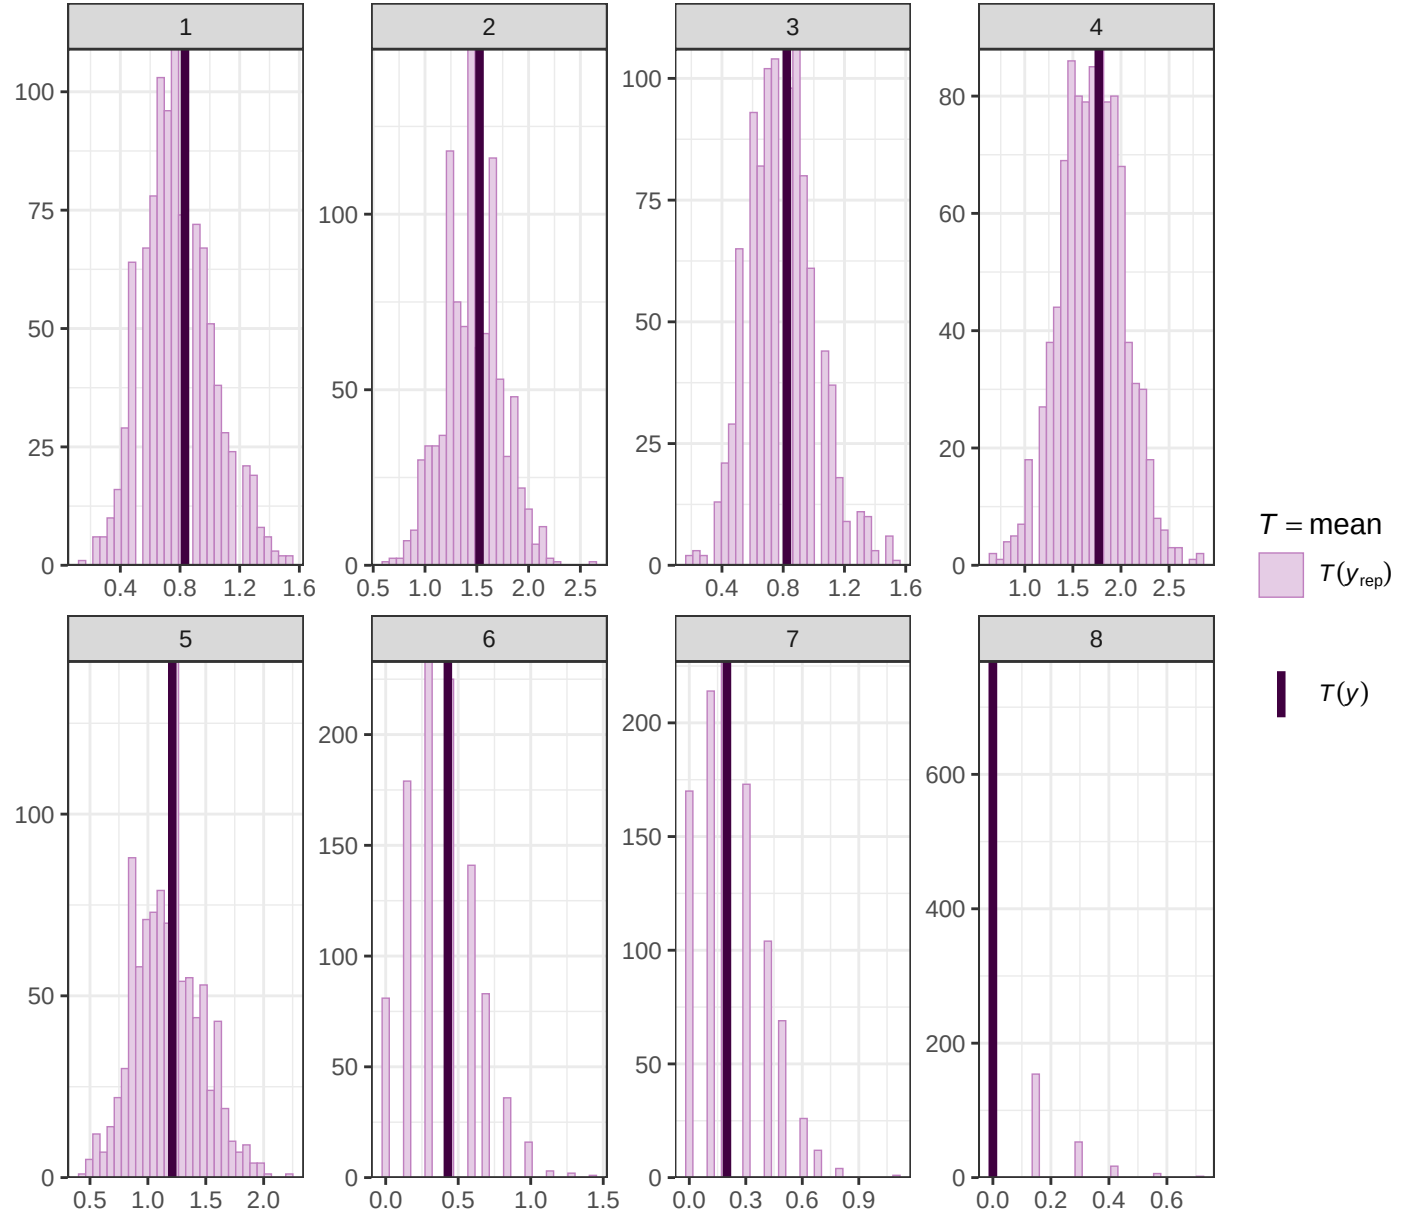
Posterior predictive checks for number of fruiting plants; non−hierarchical model



s the density of observed data (y) and the lighter lines show the densities of Y_rep from 1000 draws of the posterior

Posterior predictive checks for number of fruiting plants; hierarchical model with year−lev



s the density of observed data (y) and the lighter lines show the densities of Y_rep from 1000 draws of the posterior

Posterior predictive checks for number of fruiting plants; hierarchical model with year− an
